

Bluesio Tech

What does the company do?

Bluesio develops large data centers in Europe. These are buildings that house powerful computers used for artificial intelligence (AI), cloud services and complex calculations.

Main project

Its main project is the planned IRIS Data Center Campus in Most, Czechia, near Germany. The campus is being developed in phases and is designed to provide space, power, cooling and fast connections for these computers.

What developers should understand

The website explains the company, campus plans, facilities, development timeline, energy approach and connectivity. It helps potential customers, investors and partners learn about the project and contact the team.

Before development

Review the existing pages and user journey. Follow the approved UI/UX design and the tasks shared in Asana. Confirm any unclear features with the project team.
